

## SITE ALTERATION BY-LAW

### Municipal Resourcing Scan

Staff undertook a jurisdictional scan of adjacent municipalities to understand the resources being allocated or already allocated to responding to new regulatory requirements for excess soil management. While the information received is limited, it is illustrative of expected municipal resource planning and allocation to address these new needs.

It should be noted that Brampton is ahead in terms of being ready to implement a comprehensive Site Alteration By-law that provides an end-to-end administrative framework for fill and excess soil management.

The table below summarizes the results of the municipal scan, with further detail following the table.

Municipality	Planning for or has Site Alteration By-law?	Previous Existing Environmental Compliance FTE (staff + Mgr./Spvr.)	Existing Positions dedicated to address O. Reg. 406/19 requirements	New positions created to address O. Reg. 406/19 requirements	Additional New staff positions planned
City of Ottawa	No	3+1		2	1 (to maintain the City's proposed soil reuse site)
City of Mississauga	No	4+1	2		
Region of Peel	No	3+1	2		2 (to maintain the Region's proposed soil reuse site and new soil tracking software)

**Note:**

The City of Vaughan and the City of Hamilton were also contacted as being similar fast-growing municipalities to Brampton who are also planning or nearing introduction of Site Alteration By-laws. However, no response was received in time for inclusion in this report.
