Hello,

File #: **OZS-2023-0018** (Please include this on-record for pre-plan consideration.)

If adding much more population density to this area, we really must connect more roads to provide more thoroughfare continuity. Part of Brampton's rush hour traffic problems is because people are forced to pipe through major streets only, as there are multiple freeways and rivers cutting through the city and limiting the availability of smaller roads to travel through, making it impossible for local residents to be able to get to their homes without driving through major streets.

For this project, at the very least, we must connect the two disconnected ends of Malta Ave. per the red proposed paving as shown below:
